Chem 103
Sample Examination #1

This exam consists of eight (8) pages, including this cover page. Be sure your copy is complete before beginning your work. If this test packet is defective, ask for another one.

A copy of the Periodic Table will be distributed with the exam on a separate piece of paper. You may use the back side of the Periodic Table as scratch paper. No work on scratch paper will be graded or collected.

DO NOT WRITE BELOW THIS LINE

Part 1 (out of 51):

Part 2. Problem 1 (out of 16):

Disclaimer:

This is a copy of a typical Exam 1 given in Chem 103 during the academic year. Your test will be different. This test is being posted to give you a sense of the format, style, scope and level of a typical test on this material. This test may have questions on topics that may not be covered on your exam. Moreover, your test may have questions on topics not covered in this practice exam. Posting this test in no way limits the format, style, scope and level of the test that you will take. Do not limit your preparation to the material in this practice exam.

Part 2. Problem 2 (out of 16):

Part 2. Problem 3 (out of 16):

TOTAL (out of 100):

Part 1. Multiple Choice and Short Response (each question is worth 3 points)

1. Identify which of the following diagrams represents an element, and explain why it is not a compound or a mixture.

2. Which of the following properties is extensive, and therefore could not be used in determining the identity of a material?

- (A) density
- (B) shape
- (C) color
- (D) boiling point

3. A sample of an unknown gray metal has a mass of 3.16 g and a volume of 0.550 cm³. Which of the following is a possible identity of the material?
- (A) Magnesium, density 1.74 g/cm³
 - (B) Tin, density 5.75 g/cm³
 - (C) Gold, density 19.32 g/cm³
 - (D) Platinum, density 21.45 g/cm³

4. Fill in the missing information in the following table.

	number of protons	number of neutrons	number of electrons
¹⁸ O atom	_____	_____	_____
⁴⁰ Ca ²⁺ ion	_____	_____	_____

5. Calculate the molar mass of CuSO₄•5H₂O.

6. Identify these compounds as ionic or molecular.

- a) Ca(OH)₂
- b) P₂O₅
- c) (NH₄)₂S

7. Name the following compounds:

- Ca(OH)₂ _____
- P₂O₅ _____
- HNO₃ _____

8. Write formulas for the following compounds:

- hypochlorous acid
- dinitrogen monoxide
- copper (II) phosphate

9. Write in the correct stoichiometric coefficients to balance the following chemical equation.

10. Write and balance the chemical equation for the combustion of cyclohexane (C_6H_{12}).

11. Answer these questions. Be sure to use correct significant figures.

a) $76.0 \text{ cm}^3 = ? \text{ mL}$

b) $76.0 \text{ mm} = ? \text{ m}$

c) The answer to the problem $\frac{85.2 - 65.21}{0.005991}$ should have _____ significant figure(s).

12. How many molecules of N_2 are in a 22.8 g sample of N_2 ? Show your work. Make sure to express your answer with the correct significant figures.

13. Write the symbol of the element that corresponds to each description.

a) The halogen in period 4 of the Periodic Table is _____

b) The alkali earth metal in period 3 of the Periodic Table is _____

c) The noble gas element that has the same electron configuration as the K^+ ion is _____

14. What charge does each of these elements have when it becomes an ion?

a) The ion of chlorine has charge _____

b) The ion of sulfur has charge _____

c) The ion of magnesium has charge _____

15. What is the percentage by mass of chlorine in KClO_3 ?

16. A certain hydrocarbon is 92.26% carbon and 7.74% hydrogen. Which of the following is a possible molecular formula for this hydrocarbon?

(A) C_6H_6

(B) C_2H_6

(C) CH_4

(D) $\text{C}_3\text{H}_8\text{O}$

17. Consider the two isotopes of chlorine: ^{35}Cl and ^{37}Cl .

a) Name two things that are the same about the two isotopes.

b) Name one thing that is different about the two isotopes.

Part 2. Problems (16 points per problem)

Make sure to report answers to the proper significant figures. Show all work. Partial credit is possible even if your final answers are incorrect. No credit will be given, even for a correct answer, if no work is shown.

1. Tin has a density of 5.749 g/mL. The water displacement method is used to measure the volume of a blob of tin (diagram with volume measurements shown below). What should the mass be of the tin blob?

2. A solution containing calcium nitrate, $\text{Ca}(\text{NO}_3)_2$, is mixed with a solution containing sodium phosphate, Na_3PO_4 . White calcium phosphate crystals, $\text{Ca}_3(\text{PO}_4)_2$, precipitate from solution, and the remaining solution contains sodium nitrate, NaNO_3 .

a) Write and balance the reaction that occurs. Indicate correct phases of each substance, e.g., *(aq)*.

b) If 4.923 g of calcium nitrate were in the first solution, what mass of calcium phosphate crystals could be produced?

Extra credit (maximum 5 points)

If 3.123 g of sodium phosphate were in the second solution, which chemical (calcium nitrate or sodium phosphate) is the limiting reactant? Show work to receive credit.

3. The combustion of 1.205 g of a certain hydrocarbon (which does not contain any oxygen) produces 3.874 g of carbon dioxide and 1.322 g of water.

a) Determine the empirical formula of the hydrocarbon.

b) In a separate analysis, it was determined that the original sample of the hydrocarbon represents 0.01467 mol. What is the molecular formula of the hydrocarbon?
